

Research Summary: Class Start Times and Student Sleep

Redwood State University - Arcadia Falls, California

Department of Psychology. Principal investigator: Kwame Asante, Ph.D. Co-investigator: Isabel Moreno, Ph.D.

Summary

Moving the earliest class start from 7:30 to 8:00 a.m. in Fall 2025 was associated with about 24 more minutes of nightly sleep, better mood, and less daytime sleepiness among students.

Method

Participants (312 in Spring 2025, before the change; 298 in Spring 2026, after it) wore wrist activity monitors for two weeks, kept sleep diaries, and completed daily phone surveys.

Limitations

Participants volunteered; results may not generalize to all students.

This summary is not a peer-reviewed publication.
